Auditors' report

To the Shareholders of Credit Agricole - Egypt S.A.E.

Report on the Consolidated Financial Statements

We have audited the accompanying consolidated financial statements of Credit Agricole - Egypt S.A.E. "the Bank" and its subsidiary "together the Group", which comprise the consolidated financial position as at December 31, 2024 and the consolidated statements of income, comprehensive income, changes in owners' equity and cash flows for the financial year then ended, and a summary of significant accounting policies and other notes.

Management's Responsibility for the Consolidated Financial Statements

These consolidated financial statements are the responsibility of The Group management. Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with the rules of preparation and presentation of the banks' financial statements, basis of recognition and measurement issued by Central Bank of Egypt Board of Directors on December 16, 2008 as amended by the regulations issued on February 26, 2019 and in light of the prevailing Egyptian laws and regulations. Management's responsibility includes designing, implementing and maintaining internal controls relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatements, whether due to fraud or error; management's responsibility also includes selecting and applying appropriate accounting policies and making accounting estimates that are reasonable in the circumstances.

Auditors' Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audit. We conducted our audit in accordance with the Egyptian Standards on Auditing and in the light of the prevailing Egyptian laws. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance whether the consolidated financial statements are free from material misstatements.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatements of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal controls relevant to the "The Group" preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group internal controls. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on these consolidated financial statements.

Auditor's report (continued)

Opinion

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of the Bank as at December 31, 2024 and of its consolidated financial performance and its consolidated cash flows for the year then ended, in accordance with the rules of preparation and presentation of the banks' financial statements, basis of recognition and measurement issued by Central Bank of Egypt Board of Directors on December 16, 2008 as amended by the regulations issued on February 26, 2019 and in light of the prevailing Egyptian laws and regulations.

The accompanying notes from (1) to (39) are integral part of these consolidated financial Statements and to be read there with.

Notes to the consolidated financial statements - For the year ended 31 December 2024**1. General Information**

Credit Agricole - Egypt Bank (S.A.E.) provides corporate banking, retail, and investment banking services inside and outside the Arab Republic of Egypt and foreign countries through its head office at 5th Settlement and 86 branches that employs over 2,568 people at the balance sheet date.

The bank is an Egyptian Joint Stock Company incorporated in accordance with law 159 of 1981 in the Arab Republic of Egypt. The head office of the bank is at the Touristic Area, land piece (9/10/11/12/13) A- 5th Settlement, Cairo Governance, Egypt. The bank is listed in Egyptian Stock Exchanges.

The Egyptian Housing Finance Company (EHFC) is an Egyptian Joint Stock Company established pursuant to the provisions of the law No. 159 of 1981 and its executive regulations as amended by law No 3 of 1998, taking into consideration the provisions of law No. 95 of 1992 and its executive regulations and the Real Estate Finance Law No. 148 of 2001 and its executive regulations and the company specializes in real estate financing activity.

The bank owns a number of 9,999,000 share in which the bank share is 99.99% from the company's capital, the consolidated financial statements is comprised of the bank's financial statement and its subsidiary (both grouped and called consolidated).

This financial statement has been approved for issuance by the board of directors on February 4, 2025 and the shareholders in the General assembly meeting have the right to amend the financial statement after issuance.

2. Summary of significant accounting policies

The Bank has consistently applied the following accounting policies to all periods presented in these financial statements, except if mentioned otherwise.

A) Basis of preparation

These consolidated financial statements are prepared in accordance with rules of preparation and presentation of banks' financial statements, basis of recognition and measurement approved by the Board of Directors of the Central Bank of Egypt on 16 December 2008, along with the requirements of IFRS 9 "Financial Instruments" according to the instructions issued by the Central Bank of Egypt on 26 February 2019, in light of the Egyptian Accounting Standards issued, and what is not mentioned in the instructions of the Central Bank of Egypt shall be referred to the Egyptian Accounting Standards.

Notes to the consolidated financial statements - For the year ended 31 December 2024**B) Subsidiaries and Associates****i. Subsidiaries**

Subsidiaries are all entities (including special purpose entities) over which the Bank has owned directly or indirectly the power to govern the financial and operating policies, generally the Bank owns more than one half of the voting rights. The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing whether the Bank has the ability to control the entity. The Subsidiaries are measured in the consolidated financial statement at cost including any goodwill less impairment. The financial statements of subsidiaries are included in the consolidated financial statements of the Bank from the date on which the control commences until the date on which control ceases.

ii. Associates

Associates are all entities over which the Bank has, directly or indirectly, a significant influence, but it does not reach to the extent of control, and usually the Bank holds from 20% to 50% of the voting rights.

The associates are accounted for in the consolidated financial statement at cost including any goodwill and excluding any impairment losses in that value and the dividends income is recognized in the income statement on approval of those dividends' income on entitlement of the bank to collection.

C) Segment reporting

An operating segment is a component of the Bank that engages in business activities from which it may earn revenues and incur expenses , including revenues and expenses relating to transactions with any of the Bank's other components , whose operating results are regularly reviewed by the bank's Chief Operating Decision maker (CODM) who is represented in the executives committee to make decisions about resources to be allocated to the segment and assess its performance and for which discrete financial information is available.

D) Foreign currency Translation**i. Functional and presentation currency**

The Bank's financial statements are presented in Egyptian Pound (to the nearest thousand EGP), which is the Bank's functional and presentation currency.

ii. Transactions and balances in foreign currencies

The Bank keeps its accounting records in Egyptian pound. Transactions in foreign currencies are translated using the exchange rates prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency at the exchange rates at the reporting date. Foreign currency differences arising on translation are generally recognized in income statement, however, foreign currency difference arising from the translation of the following items are recognized in OCI:

- equity investments in respect of which an election has been made to present subsequent changes in fair value in OCI;
- a financial liability designated as a hedge of the net investment in a foreign operation to the extent that the hedge is effective (not applicable for the current year); and
- qualifying cash flow hedge to the extent that the hedge is effective (not applicable for the current year).

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

E) Financial assets and liabilities

i. Initial recognition and measurement

The Bank initially recognizes financial assets and financial liabilities on the date on which the bank becomes a party in a contractual condition of financial instrument.

A financial asset or financial liability is measured initially at fair value, plus for an item that are not at fair value through profits and losses, transaction costs that are directly attributable to its acquisition or issue.

ii. Classification

Financial assets

- On initial recognition, a financial asset is classified as measured at amortized cost, FVOCI or FVTPL

Financial Instrument	Classification		
	Amortized cost	Fair value	
		Through other comprehensive income	through profit or loss
Equity Instrument	Not applicable	One-time option upon initial recognition Irrevocable	Normal treatment for equity instruments
Debt instruments	Business model of assets is to hold for collecting contractual cash flows	Business model of assets is achieved by both collecting the contractual cash flows and selling financial assets	All other financial assets are classified as measured at FVTPL, held for trading

Financial asset	Business model	Main characteristics
Financial assets at amortized cost	Business model for Financial Assets Held to collect contractual cash flows	<ul style="list-style-type: none"> ▪ The objective of the business model is to retain financial assets to collect the contractual cash flows represented in the principal amount of the investment and the interests. ▪ A sale is an exceptional contingent event for the purpose of this model and under the terms of the Standard comprising deterioration in the creditworthiness of the issuer of the financial instrument. ▪ Lowest sales in terms of turnover and value. ▪ A clear and reliable documentation process for the justifications of each sale and its conformity with the requirements of the Standard shall be conducted by the bank.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

E) Financial assets and liabilities (continued)

ii. Classification (continued)

Financial asset	Business model	Main characteristics
Financial assets at fair value through other comprehensive income	Business model for financial assets held to collect contractual cash flows and selling	<ul style="list-style-type: none"> Both the collection of contractual cash flows and sale are complementary to the objective of the model. High sales (in terms of turnover and value) compared to the business model held for the collection of contractual cash flows. The contractual terms of the financial asset give rise on specified dates to cash flows that are SPPI. Mainly consists of financial investments measured at FVOCI.
Financial assets at fair value through profits and losses	Other business models, which include (trading - management of financial assets based on fair value - maximising cash flows through sale)	<ul style="list-style-type: none"> The objective of the business model is not to hold the financial asset for the collection of contractual cash flows or hold the financial asset to collect contractual cash flows and sale. The collection of contractual cash flows is a contingent event for the objective of the model. The Bank may irrecoverably designate a financial asset that otherwise meets the requirements to be measured at amortized cost or at FVOCI as at FVTPL if doing so eliminates or significantly reduces an accounting mismatch that would otherwise arise. Mainly consist of Derivative financial instruments, and financial investments at fair value through profit or loss.

Business model assessment

- The Bank makes an assessment of the objective of a business model in which an asset is held at a portfolio level as it reflects the way the business is managed, and information is provided to management. The information considered includes:
 - The stated policies and portfolio's objectives and application of such policies in practice. In particular, whether the management's strategy focuses only upon collection of contractual cash flows and holding a definite interest rate to compare maturity dates of financial assets with maturity dates of liabilities that finance such assets or generates cash flows from sale of assets.
 - Way of evaluating and reporting the portfolio's performance to senior management.
 - Risks that affect business model performance including nature of financial assets held in such model and the way of managing such risks.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****E) Financial assets and liabilities (continued)****ii. Classification (continued)**

- Way of evaluating the performance of business managers (fair value and/or interest on portfolio, or both).
- The frequency, volume and timing of sales in prior periods, reasons of such transactions, and forecasts regarding future sale activities. However, information regarding sale activities is not taken into consideration separately but as a part of a whole comprehensive assessment of how to achieve the bank's objective from managing the financial assets and how to generate cash flows.
- The financial assets held for trading, or managed and its performance valued on basis of fair value are measured at fair value through profits and losses since they are not held to collect contractual cash flows or to collect contractual cash flows and sell financial assets together.

Assessment of whether the contractual cash flows of an asset represent payments restricted upon principal amount of instrument and interest

For purpose of this assessment, the bank identifies the principal amount of financial instrument as the fair value of financial asset upon initial recognition. Further, the bank identifies the interest as time value of money and credit risks related to the principal amount during specific period and other main loan risks and costs (such as liquidity risks and administrative costs) in addition to profit margin.

In order to evaluate whether the contractual cash flows of the asset are represented solely in principal and interest, the bank takes into its consideration the contractual conditions of the instrument. This includes assessing of whether the financial asset includes contractual conditions that may change date or amount of contractual cash flows which result in breach of this condition. In order to carry out such assessment, the bank takes into consideration the following matters:

- contingent events that may change the amount and timing of cash flows.
- Specifications of financial leverage (interest rate, terms, currency type ...).
- Terms of accelerated payment and term extension.
- Terms that may limit the bank's ability to claim cash flows from certain assets (e.g. non-recourse loans).
- Specifications that may be amended for time value of cash (periodically repricing interest rate).

iii. Reclassification

- The financial assets are reclassified upon initial recognition only if the bank changes business model of managing such assets.
- In all cases, reclassification between financial liabilities at fair value through profits and losses and financial liabilities at amortized cost are not conducted.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****E) Financial assets and liabilities (continued)****iv. De-recognition****1- Financial assets**

- The financial asset is derecognized when the effective period of contractual right to obtain cash flows from financial asset expires or the bank transfers the right to receive contractual cash flows in a transaction whereby the risks and benefits associated materially with ownership are transferred to another party.
- When a financial asset is derecognized, difference between asset's book value (or book value allocated to part of the excluded principal) and total of received consideration (including any new asset obtained less any new commitment incurred) and any profits or losses has been previously recognized in the fair value reserve of financial investments at fair value through statement of other comprehensive income is recognized in statement of profits and losses.
- Any cumulative gain or loss recognized in statement of other comprehensive income related to investing in equity instruments allocated as investments at fair value through statement of other comprehensive income are not recognized in profits and losses upon disposal of such asset. Any share resulted or held from the asset qualified for disposal (eligible for disposal) shall be recognized as separate asset or liability.
- When the bank makes transactions whereby it transfers assets that have been previously recognized in statement of financial position, but materially held most of risks and benefits associated with the transferred asset or part of it. In such cases, the transferred asset shall not be derecognized.
- In respect of transactions in which the bank does not materially hold or transfer all risks and benefits associated with asset ownership and hold control over the asset, the bank continues to recognize the asset within the extent of its continuous commitment to financial asset. The continuous commitment of the bank to the financial asset shall be determined based on the bank's exposure to changes in value of transferred asset.

2- Financial liabilities

- The Bank derecognizes a financial liability when its contractual obligations are discharged or cancelled or expire.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****E) Financial assets and liabilities (continued)****v. Modifications of financial assets and liabilities****1. Financial assets**

If the terms of a financial asset are modified, then the bank evaluates whether the cash flows of the modified asset are substantially different. If the cash flows are substantially different, then the contractual rights to cash flows from the original financial asset are deemed to have expired and hence the original financial asset is derecognized and a new financial asset is recognized at fair value plus any eligible transaction costs and the value resulted from adjusting aggregate book value shall be recognized as profits or losses under profits and losses. On the other hand, if such adjustment has occurred due to financial difficulties of the borrower, the profits have to be deferred and presented with aggregate impairment losses whilst losses have to be recognized in the statement of profits and losses.

If the cash flows of adjusted asset recognized at amortized cost do not materially differ, the adjustment shall not result in derecognition of financial asset.

2. Financial liabilities

The Bank derecognizes a financial liability when its terms are modified and the cash flows of the modified are substantially different. In such case, a new financial liability is recognized according to the amended terms at fair value. The difference between carrying amount of old financial liability and new financial liability shall be recognized in accordance with amended terms in profit or loss.

If the modification of a financial liability is not accounted for as derecognition, then the amortized cost of the liability is recalculated by discounting the modified cash flows at the original effective interest rate and the resulting gain or loss is recognized in profit or loss.

vi. Offsetting financial assets and liabilities

Financial assets and financial liabilities are offset and the net amount presented in the statement of financial position when and only when the Bank currently has a legally enforceable right to offset the recognized amounts and there is an intention to settle them on a net basis or to realize the asset and settle the liability simultaneously.

Income and expenses are presented on a net basis only when permitted under Egyptian Accounting Standards, or for gains and losses arising from group of similar transactions such as in the Bank's trading activity.

vii. Fair value measurement

The fair value is the price that will be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date in the principal or in its absence, the most advantageous market to which the Bank has access at that date. The fair value of a liability reflects its non-performance risk.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****E) Financial assets and liabilities (continued)****viii. Fair value measurement (continued)**

When one is available, the Bank measures the fair value of an instrument using the quoted price in an active market for that instrument. A market is regarded as “active” if transactions for the assets or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.

If there is no quoted price in an active market, the Bank uses valuation technique that maximize the use of relevant observation inputs and minimize the use of unobservable inputs such as using other relevant prices and information result from market transactions of similar assets or liabilities.

When it cannot be relied upon the market approach to determine the fair value of a financial asset or financial liability, the Bank uses the income approach to determine fair value whereby future payments such as cash flow or income and expenses are transferred to current amount (discounted) so that the fair value measurement reflects current market expectations about future payments.

Specific valuation techniques used to determine fair values of financial instruments include:

- Quoted prices for similar assets or liabilities in active markets.
- Interest rate swaps by calculating the present value of the estimated future cash flows based on observable yield curves.
- The fair value of forward foreign exchange contracts is determined using the current value of the expected cash flows by using the future foreign exchange of the currency of contract.
- Analysis of deducted cash flows to determine fair values of other financial instruments.

F) Fair value hierarchy:

Fair values of financial assets and liabilities are determined according to the following hierarchy:

Level 1 – valuation technique using quoted market price: financial instruments with quoted prices for identical instruments in active markets that the bank can access at the measurement date.

Level 2 – valuation technique using observable inputs: financial instruments with quoted prices for similar instruments in active markets or quoted prices for identical or similar instruments in inactive markets and financial instruments valued using models where all significant inputs are observable.

Level 3 – valuation technique with significant unobservable inputs: financial instruments valued using valuation techniques where one or more significant inputs are unobservable.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

G) Impairment

The Bank recognizes loss allowance for expected credit losses (ECL) on the following financial instruments that are not measured at FVTPL:

- Financial assets that are debt instruments.
- Financial guarantee contracts issued; and
- Loan commitments issued.
- No impairment loss is recognized on equity investments.

Recognition and measurement of Expected Credit Loss

Financial assets are classified into three stages of credit rating as follows:

Staging	Stage 1	Stage 2	Stage 3
Characteristics	For a financial instrument to be classified as a Stage 1 instrument, the instrument must be compliant with the terms and conditions of the disbursement of the instruments, in addition to complying with the agreed upon payment schedule, and the absence of significant increase in credit risk.	For a financial instrument to be classified a Stage 2 instrument, the instrument in question must experience a significant increase in credit risk from the initial recognition	For a financial instrument to be classified as a Stage 3 instrument, it must be considered credit impaired.
Effect on the calculation of the Estimated Credit Loss	The Estimated Credit Loss for instruments classified as Stage 1 instruments are calculated over a 12-month period.	The Estimated Credit Loss for instruments classified as Stage 2 instruments are calculated over the lifetime of the financial instrument.	The Estimated Credit Loss for instruments classified as Stage 3 instruments are calculated over the lifetime of the financial instrument.

➤ Significant Increase in Credit Risk (Stage 2)

An assessment of whether credit risk has increased significantly since initial recognition is performed at each reporting period by considering the change in the risk of default occurring over the remaining life of the financial instrument. The assessment explicitly or implicitly compares the risk of default occurring at the reporting date compared to that at initial recognition, considering reasonable and supportable information, including information about past events, current conditions, and future economic conditions. The assessment is unbiased, probability-weighted, and to the extent relevant, uses forward-looking information consistent with that used in the measurement of ECL. The analysis of credit risk is multifactor. The determination of whether a specific factor is relevant, and its weight compared with other factors depends on the type of product, the characteristics of the financial instrument and the borrower, and the geographical region.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2.2. Summary of significant accounting policies (continued)****G) Impairment (continued)**

Therefore, it is not possible to provide a single set of criteria that will determine what is considered to be a significant increase in credit risk and these criteria will differ for different types of lending, particularly between retail and wholesale. However, unless identified at an earlier stage, all financial assets are deemed to have suffered a significant increase in credit risk when 30 days past due. In addition, wholesale loans that are individually assessed, typically corporate and commercial customers, and included on a watch or worry list are included in stage 2

For certain portfolios of debt securities where external market ratings are available and credit ratings are not used in credit risk management, the debt securities will be in stage 2 if their credit risk increases to the extent, they are no longer considered investment grade. Investment grade is where the financial instrument has a low risk of incurring losses, the structure has a strong capacity to meet its contractual cash flow obligations in the near term and adverse changes in economic and business conditions in the longer term may, but will not necessarily, reduce the ability of the borrower to fulfil their contractual cash flow obligations.

For retail portfolios, default risk is assessed using a reporting date 12-month PD derived from credit scores which incorporate all available information about the customer. This PD is adjusted for the effect of macroeconomic forecasts for periods longer than 12 months and is a reasonable approximation of a lifetime PD measure. Retail exposures are first segmented into homogeneous portfolios, generally by country, product and brand. Within each portfolio, the stage 2 accounts are defined as accounts with an adjusted 12-month PD greater than the average 12-month PD of loans in that portfolio 12 months before they become 30 days past due. The expert credit risk judgments are that no prior increase in credit risk is significant. This portfolio-specific threshold identifies loans with a PD higher than would be expected from loans that are performing as originally expected and higher than that which would have been acceptable at origination. It therefore approximates a comparison of origination to reporting date PDs.

First: (Quantitative Factors):**○ (Backstop – Days of Past Dues)**

Loans and facilities for corporates, SMEs and retail banking are allocated to Stage 2 if the default period exceeds at least 30 days and less than 90 days.

○ Probability of Default (PD):

Upon increase of the PD over the remaining life of the financial, compared to the PD over the expected remaining life upon the initial recognition in accordance with the risk structure accepted by the Bank.

Second: (Qualitative Factors):**Retail Banking, Small and very small companies' loans:**

If the borrower experiences one or more of the following events:

- The borrower submits a request to convert short-term repayment to long-term as a result of negative impacts related to the borrower's cash flows
- Extending the period granted for repayment upon the borrower's request
- Recurring previous arrears during the previous 12 months
- Negative future economic changes that affect the borrower's future cash flows.

Notes to the consolidated financial statements - For the year ended 31 December 2024**Corporate and medium sized enterprises loans:**

- Actual or expected external credit rating downgrade for the loans & credit facilities / debt instrument.
- Significant adverse changes in the performance and behavior of the borrower, such as delay in paying installments or showing no positive response towards the Bank.
- The need to re-organize the debtor's obligations (restructuring the liabilities) due to weak ability of payment or declining cash flows, and the need to amend contractual conditions with the debtor or cancelling waiving) some existing contractual condition, due to the existence of actual/expected breach of the current conditions in light of the debtor's inability to continue with the Bank within the existing contract, such as giving the debtor grace periods whether for the interest or the principal instrument/exposure that was not originally stated in the contract, or increasing the interest rate / interest for future period
- The Bank having information about the existence of amounts due from the debtor, whether to the Bank or to any other creditor, that affect its ability of repayment.
- Higher interest rate on loans & credit facilities / debt instrument due to higher credit-risk of the debtor for the current period (higher risk pricing) compared to prices upon acquisition (inception or purchase) of loans & credit facilities / debt instrument.
- An actual or expected adverse change in the operating results of the borrower (Examples include actual or expected declining revenues or margins, increasing operating risks, working capital deficiencies, decreasing asset quality, increased balance sheet leverage, weak and deteriorating liquidity or management problems or discontinuance of a segment of the customer's business) that results in a significant change in the borrower's ability to meet its debt obligations.
- Changes in the Bank's credit management approach in relation to the loans & credit facilities / debt instrument; i.e. based on emerging negative indicators and changes in the risk of the loans & credit facilities / instrument, the Bank's credit risk management practice is expected to become more active or to be focused on managing the instrument, including the instrument becoming more closely monitored or controlled, or the Bank specifically intervening with the debtor to manage the loans & credit facilities / instrument.
- Essential changes in the conditions & terms of the loans & credit facilities / debt instrument that would be significantly different if the loans & credit facilities / instrument were newly originated or issued at the reporting date (such as more stringent covenants, increased amounts of collateral or guarantees) because of increase in the credit risk of the loans & credit facilities / instrument since initial recognition.
- Essential increase in credit risk of loans & credit facilities / for other debt instruments of the same borrower from other lenders.
- Adverse changes in the value of the guarantees or collateral presented by a third party or presented for supporting the obligation, which may result in reducing the borrower's economic incentive to make scheduled contractual payments or to otherwise have a negative effect on the probability of a default (PD).
- Adverse changes in the quality of the guarantee provided by a shareholder (or the parent company) if the shareholder (or parents) have an incentive or financial ability to prevent default by capital or cash infusion.
- Adverse changes resulting from reductions in financial support from the parent company or other affiliates, that are expected to reduce the borrower's ability to make scheduled contractual payments.
- Significant adverse changes in external market indicators of credit risk for particular loans & credit facilities or similar financial instruments with the same expected life, declining prices of the financial instruments issued by the borrower, such as bonds & stocks, and other negative information about the borrower in the market)

Notes to the consolidated financial statements - For the year ended 31 December 2024**➤ Credit impaired (Stage 3)**

The Bank determines that a financial instrument is credit-impaired and in stage 3 by considering relevant objective evidence, primarily. Whether:

Contractual payments of either principal or interest are past due for more than 90 days.

There are other indications that the borrower is unlikely to pay such as that a concession has been granted to the borrower for economic or legal reasons relating to the borrower's financial condition; and the loan is otherwise considered to be in default.

If such unlikelihood, even where regulatory rules permit default to be defined based on 90 days past due. Therefore, the definitions of credit-impaired and default are aligned as far as possible so that stage 3 represents all loans which are considered defaulted or otherwise credit-impaired.

First: Quantitative criteria:

- If the borrower defaults more than 90 days to repay the contractual instalments, he is considered to be in default.
- If the Probability of Default results from of credit worthiness assessment proves default and impairment of financial asset.

Second: Qualitative criteria:

- Significant financial difficulty of the issuer or the borrower.
- A breach of contract, such as a loan covenant
- Bank has put credit obligation on non-accrued status
- Bank consents to distressed restructuring of obligation where there is likely to be material forgiveness or postponement of principal, interest or fees.
- Bank, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concession(s) that the lender(s) would not otherwise consider.
- It is becoming probable that the borrower will enter bankruptcy or other financial reorganization.
- The disappearance of an active market for that financial asset because of financial difficulties.
- Any other factors the bank thinks that it may result in default of impairment of financial asset as per the bank's internal policy.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****G) Impairment (continued)****- Transition between Credit Stages:****First: Transition from Stage 2 to Stage 1**

The financial asset should be transferred from Stage 2 to Stage 1 only after all the quantitative and qualitative elements of Stage 1 are met and the full past due amounts of the financial asset and its interests are paid.

Second: Transition from Stage 3 to Stage 2

The financial asset shall not be moved from Stage 3 to Stage 2 before meeting all the following conditions, subject to Substandard & Doubtful Debt Committee (SDDC) or Credit Risk Committee (CRC) approval.:

- Fulfilling all quantitative and qualitative elements of Stage 2.
- Payment of 25% of the outstanding balances of the financial asset and payment of all due interest (marginalized/suspended)
- Regularity of payments for at least 12 months.

Definition of default

The concept of “default” is critical to the implementation of IFRS 9. In IFRS 9 the assessment of whether there has been a significant increase in credit risk since initial recognition or not is dependent on change in the default risk occurring over the expected life of the financial instrument.

Furthermore, IFRS 9 requires that assets meeting the definition of credit impaired (‘Stage 3 Assets’) should be disclosed and the definition of credit impaired includes references to defaults, as well as other events that have a detrimental impact on estimated future cash flows.

This is a key expedient from the perspective of implementation of IFRS 9 due to the following reasons:

- In general, rating systems at Banks are calibrated to 12-Month risk of default, measured in terms of Probability of Default (PD). Therefore, it is easier for the Banks to assess the SICR by comparing 12-month risk of default across the date of initial recognition and the reporting date.
- Banks normally use a 12-Month PD measure for prudential regulatory requirements. It would be easy to leverage their existing systems and methodologies as a starting point to determine the significant increases in credit risk, thus keeping the efforts of implementation (for this area) within reasonable bounds.

In definition of “Default” for IFRS 9, the bank follows the principles given below as gleaned from the Technical Guidance:

- a) Alignment with regulatory guidelines, credit impairment definition & internal credit risk management practices
- b) Combination of Quantitative PD based rules and Qualitative UTP indicators
- c) Incorporate any differences for financial instrument type, obligor type if justifiable

Notes to the consolidated financial statements - For the year ended 31 December 2024**Definition of Default: (continued)**

- d) 90 DPD or more based thresholds for different segments like Very Large, Large, and 180 Days for Medium or Small enterprise
- e) One or more of the following qualitative indicators:
 - Significant financial difficulty of the issuer or the borrower;
 - A breach of contract, such as a loan covenant
 - Bank has put credit obligation on non-accrued status;
 - Bank consents to distressed restructuring of obligation where there is likely to be material forgiveness or postponement of principal, interest or fees.
 - Bank, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concession(s) that the lender(s) would not otherwise consider;
 - It is becoming probable that the borrower will enter bankruptcy or other financial reorganization;
 - The disappearance of an active market for that financial asset because of financial difficulties.

As per current risk management practice Bank considers credit impaired assets in rating grade E-/Non-performing, F&Z based on internal credit risk review process.

Measurement of ECL

The key inputs into the measurement of ECL are the term structure of the following variables:

- Probability of Default (PD)
- Loss Given Default (LGD)
- Exposure at Default (EAD)

ECL for exposure in Stage1 are calculated by multiplying the 12-month PD by LGD and EAD. Lifetime ECL are calculated by multiplying the lifetime PD by LGD and EAD.

PD: Credit risk grades are primary input into the determination of the term structure of PD for exposures. The Bank collects performance and default information about its credit risk exposures analyzed by type of product and borrower as well as by credit risk grading. The Bank employs statistical models to analyze the data collected and generate estimates of the remaining lifetime PD of exposures and how these are expected to change as a result of the passage of time.

LGD: is the magnitude of the likely loss if there is a default. The Bank estimates the LGD parameters based on the history of recovery rates against defaulted counterparties. The LGD models consider the structure, collateral, industry, and facility product of the counterparty.

EAD: represents the expected exposure in the event of a default. The Bank derives the EAD from the current exposure to the counterparty and potential changes to the current amount allowed. The EAD of a financial asset is its gross carrying amount at the time of default. For lending commitments, the EADs are potential future amount that may be drawn under the contract, which are estimated based on historical observations and forward-looking forecasts. For financial guarantees, the EAD represents the amount of the guaranteed exposure when the financial guarantee becomes payable.

Notes to the consolidated financial statements - For the year ended 31 December 2024

The bank measures ECL considering the risk of default over the maximum contractual period over which it is exposed to credit risk. The maximum contractual period extends to the date at which the Bank has the right to require payment of a loan or terminate a loan commitment or guarantee. However, for retail overdrafts and credit card facilities that include both a loan and an undrawn commitments component, the Bank measures ECL over a period longer than the maximum contractual period if the Bank's contractual ability to demand repayment and cancel the undrawn commitments does not limit the Bank's exposure to credit losses to the contractual notice period. These facilities don't have a fixed term or repayment structure and are managed on a collective basis.

The Impact of future looking for economic factors upon Probability of Default and Loss Given Default:

- Economic indicators issued by the international valuation corporation and sources are applied.
- It is relied upon many economic indicators that have historical correspondence with default rates of geographical range in accordance with the indicators of the international valuation corporation and sources.
- Regarding the financial assets granted within the geographical range of Egypt, it is relied upon the economic indicators of trading volume in the Egyptian Stock Exchange as well as growth rate Gross Domestic Product (GDP) of Egypt.
- Regarding other financial assets located outside the geographical range of Egypt, it is relied upon the economic indicators of these areas such as Arab Gulf, United States of America, United Kingdom and Europe.
- Effect of such indicators on probability of default and Loss Given Default is calculated according to three different scenarios which are: normal, optimistic and reserved scenarios.
- Weighted average of these scenarios is calculated on basis of 50% normal scenario, 25% optimistic scenario and 25% reserved scenario.

Financial Assets of Retail Portfolio:**○ Probability of Default (PD):**

Markov Chain mechanism is used. It includes the following:

- Historical conversion ratios of a group of customers from performing into non-performing and vice versa at the beginning of the period and comparing such ratios to the same group of customers at the end of the period.
- Annual conversion ratios of DPD Buckets for customers.
- The aforementioned conversion ratios will be used to make change average matrix for each year to establish an approach for expected changes according to the difference between annual changes average and the real matrix of portfolio named Credit Index. Accordingly, examine the effect of change by using regression model considering the national economic indicators expected upon future probability of default for each product.

Presentation of allowance for ECL in the statement of financial position

Loss allowance for ECL are presented in the statement of financial position as follows:

- Financial assets measured at amortized costs: as a deduction from the gross carrying amount of the assets;
- Loan commitments and financial guarantee contracts: generally, as provision
- Debt instruments measured at FVOCI: no loss allowance is recognized in the statement of financial position because the carrying amount of these assets is their fair value. However, the loss allowance is disclosed and recognized in the fair value reserve.

Notes to the consolidated financial statements - For the year ended 31 December 2024**Write-off**

Financial assets (and the related impairment allowances) are normally written off, either partially or in full, when there is no realistic prospect of recovery. Where loans are secured, this is generally after receipt of any proceeds from the realization of security. In circumstances where the net realizable value of any collateral has been determined and there is no reasonable expectation of further recovery, write-off may be earlier, however the bank remains following up on the balances through legal or other mechanism even after they are written off from the books.

I) Financial derivatives instruments and hedge accounting

Derivatives are recognized at fair value on the date on which a derivative contract is entered into and are subsequently re-measured at their fair value. Fair value is obtained from market prices quoted in active markets, recent market transactions or valuation techniques such as discounted cash flow models and options pricing models, as the case may be. All derivatives are presented within the assets if the fair value is positive, or within liabilities if the fair value is negative.

Embedded derivatives contracts are not separated when the derivative is associated with a financial asset and therefore all embedded derivatives contract is classified with the financial asset associated therewith.

Derivatives that do not qualify for hedge accounting.

Changes in the fair value of derivative instruments that do not qualify for hedge accounting are recognized in the statement of profits and losses under “net trading income”. However, profits and losses arising from changes in the fair value of derivatives that are managed in conjunction with financial assets and liabilities at fair value through profits and losses are included in statement of profits and losses under ‘Net income from financial instruments at fair value through profits and losses.

Embedded derivatives

Derivatives may be embedded in another contractual arrangement (a host contract). The bank accounts for an embedded derivative separately from the host contract when:

- The host contract is not an asset in the scope of IFRS (9).
- The host contract itself is not measured at fair value through profits and losses.
- The terms of the embedded derivative would meet the definition of a derivative if they were contained in a separate contract; and
- Economic characteristics and risks of the embedded derivatives are not closely related to the economic characteristics and risks of the host contract.

Separated embedded derivatives are measured at fair value, with all changes in fair value recognized in profit or loss unless they form part of qualifying cash flow or net investment hedging relationship. Separated embedded derivatives are presented in the statement of financial position together with the host contract.

J) Recognition of deferred day one profit and loss

The best evidence of fair value at initial recognition is the transaction price (the fair value of the consideration given or received), unless the fair value of the instrument is evidenced by comparison with other observable current market transactions in the same instruments or based on valuation

Notes to the consolidated financial statements - For the year ended 31 December 2024

technique. When the bank has entered into transactions that come due after the lapse of a long period of time, fair value is determined using valuation models whose inputs do not necessarily come from quoted prices or market rates. These financial instruments are initially recognized at the transaction price, which represents the best index to fair value, despite the value obtained from a valuation model may be different. The difference between the transaction price and the model value is not immediately recognized, commonly referred to as “day one gains or losses”. It is included in other assets in case of loss, and other liabilities in case of gain.

K) Interest income and expenses

Interest income and interest expense for all interest-bearing financial instruments, except for those classified as held for trading or designated initially at fair value through profits and losses, are recognized in a statement within ‘interest of similar loans and revenues’ or “cost of similar deposits and costs” using the effective interest method.

The effective interest rate is the rate that exactly discounts estimated future cash flows expected to be paid or received through the expected life of the financial instrument or, when appropriate, a shorter period to accurately determine the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the Bank estimates cash flows considering all contractual terms of the financial instrument (for example, early payment options) but does not consider future credit losses. The calculation includes all fees paid or received between parties to the contract that are considered as part of the effective interest rate. Also, the transaction cost includes any premiums or discounts.

When loans or receivables are classified as non-performing or impaired as the case may be, the related interest income is not recognized but is rather carried off the financial statements in marginal records and is recognized as revenues according to cash basis as per the following:

- When they are collected, after receiving all past due instalments for consumption and real estate loans for personal housing and small loans for economic activities.
- For corporate loans, cash basis is also applied, where the interest subsequently calculated is given in accordance with the loan scheduling contract, until 25% of the scheduling instalments are collected and with a minimum of one year of regular payments. In case the customer continues to make payments on a regular basis, the interest calculated on the outstanding loan is recognized in the profit or loss as interest income (interest on regular scheduling balance) without marginal interest before scheduling which is not recognized as revenues except after paying all the loan balance in the balance sheet before scheduling.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****L) Fees and commission**

Fees that are due for a loan service or a facility are recognized as revenues when the service is rendered. Fees and commissions income related to non-performing or impaired loans or debts are suspended and are carried at off-balance sheet in marginal records and are recognized under revenues according to the cash basis when interest income is recognized in accordance with item (I). Fees and commissions income and expenses that are integral part to the effective interest rate on a financial assets or financial liability are included in the effective interest rate.

Commitment fees on loans are deferred when there is probability that loans will be used, as it represents a compensation for the continuous interference to own the financial instrument. Subsequently, it is recognized as an adjustment to the effective interest rate of the loan. If the commitment period passed without issuing the loan, commitment fees are recognized as income at the end of the commitment period. If a loan commitment is not expected to result in the draw-down of a loan, then the related loan commitment fee is recognized on a straight- line basis over the commitment period.

Fees related to debt instruments measured at its fair value are recognized as income at initial recognition. Fees related to marketing of syndicated loans are recognized as income when the marketing process is completed, and the loan is fully used or if the Bank kept its share of the syndicated loan using the effective interest rate similar to other participants.

Fees and commissions arising from negotiation or participating in negotiation over a transaction in favor of another party -such as arrangement to buy shares or other financial instruments or acquire or sell entities, are recognized in statement of profits and losses upon completion of concerned transaction. Fees of management consultation and other services are usually recognized on a time-apportion basis over the period of performing the service. Financial planning and custody services fees provided on long periods are recognized over the period in which the service is provided.

M) Dividend income

Dividends are recognized in the statement of profits and losses when the right to receive those dividends is established.

N) Sale and Re-purchase agreements (Repos)

Treasury bills sold according to Sale and Re-purchase agreements are presented in the assets in Treasury bills sold with repurchase agreements in the financial position. Difference between the sale value and re-purchase amount is recorded as an interest which is amortized over the contractual period using effective interest rate method. The amounts received from sale are presented in Due to Banks. Securities purchased from banks under agreements to resell are presented into Due from Banks in the balance sheet, and presented on net basis, the difference between sale and repurchase price is treated as interest and accrued over the life of the agreements using the effective interest method.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****O) Intangible Assets****Software:**

Software acquired by the Bank is measured at cost less accumulated amortization and any accumulated impairment losses. Expenditures on internally developed software is recognized as an asset when the Bank is able to demonstrate that the product is technically and commercially feasible. Its intention and ability to complete the development and use the software in a manner that will generate future economic benefits. Subsequent expenditure on software assets is capitalized only when it increases the future economic benefits embodied in the specific asset to which it relates. All other expenditures are recognized in profit or loss as it is incurred. Software is amortized on a straight-line basis in profit or loss over its estimated useful life which is five to ten years.

P) Property, plant and equipment

Land and building comprise mainly head office, branches, and offices. All items of property, plant and equipment are measured at cost less accumulated depreciation and impairment losses. Costs include all expenditures that are directly attributable to the acquisition of the fixed asset items.

Subsequent costs are included in the asset's carrying amount or are recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the bank and the cost of the item can be measured reliably. Ongoing repairs and maintenance are expensed as incurred.

Land is not depreciated. Depreciation of other assets is calculated using the straight-line method to allocate their cost to their residual values over their estimated useful lives, as follows:

○ Buildings	20:30 years
○ Fixtures	5 years
○ Furniture	10 years
○ Machinery and equipment	8 years
○ Vehicles	5 years
○ Computers	5:10 years
○ Others	Up to 10 years

Q) Impairment of non-financial assets

Assets that have an indefinite useful life are not subject to amortization-except goodwill- and are tested annually for impairment. Assets that are subject to amortization are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognized in profit or loss for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less costs to sell and value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units). An impairment loss in respect of goodwill is not reversed. For other assets, an impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortization, if no impairment loss had been recognized.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****R) Leases**

Finance leases are accounted for according to Law No. 95 of 1995 if the contract gives the right to the lessee to purchase the assets on a specified date and with specified amount where the contract's period represents at least 75% of the expected useful life of the asset or the present value of total lease payments represents at least 90% of the asset's value. Other lease contracts are considered operating leases.

○ **The Bank acting as a lessee.**

For finance lease contracts, lease expenses including leased asset maintenance when incurred. If the Bank decides to use the purchase option, cost of the option is capitalized and depreciated over the remaining useful life of the asset using methods applied for similar assets.

Lease payments less any discounts under operating lease are charged as an expense in the income statement on a straight-line basis over the lease term.

○ **The Bank as a lessor**

When the Banks acts as a lessor, it determines at lease inception whether the lease is a finance lease or an operating lease. To classify each lease, the Bank makes an overall assessment of whether the lease transfers substantially all of the risks and rewards or not.

At the commencement of an operating lease, the Bank recognizes lease payments from operating lease as income on a straight-line basis.

S) Cash and cash equivalents

For the purpose of the cash flows statement, cash and cash equivalents comprise balances with less than three months' maturity from the date of acquisition, including cash and balances due from Central Banks other than for mandatory reserve, current accounts with banks, and treasury bills and other governmental securities.

T) Other provisions

Provisions for restructuring costs and legal claims are recognized when: The Bank has a present legal or constructive obligation as a result of past events; it is more likely than not that an outflow of resources will be required to settle the obligation; and the amount can be reliably estimated. Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. A provision is recognized even if the likelihood of an outflow with respect to any one item included in the same class of obligations may be small. Reversals of provisions no longer required are presented in other operating income and (expense).

Provisions are measured at the present value of the expenditures expected to be required to settle the obligation using a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the obligation. If the settlement is within one year or less, provisions will be measured by the contractual value if there is no material variance otherwise, it will be measured at present value. The unwinding of the discount is recognized as interest expense.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****U) Financial guarantees and loan commitments**

Financial guarantees are contracts that require the Bank to make specified payments to reimburse the holder for a loss that incurs because a specified debtor fails to make payment when it is due in accordance with the terms of a debt instrument. Financial guarantees are generally issued by the bank to beneficiary banks, corporations and other entities on behalf of the bank's clients.

Loan commitments are firm commitments to provide credit under pre-specified terms and conditions. Financial guarantee issue or commitments in scope of IFRS 9 in accordance to the CBE instructions are measured at its fair value plus, transaction costs that is directly attributable to the issue of such financial guarantee/ commitment.

After initial recognition, they are measured at the higher of:

- The amount initially recognized less, when appropriate, cumulative amount of income recognized in profit or loss using the straight-line method over the term of the guarantee; and
- The best estimate of the payments required to settle any financial obligation resulting from the financial guarantee at the financial position date.

Any increase in the obligations resulting from the financial guarantee, shall be recognized within other operating income (expenses) in the income statement. Liabilities arising from financial guarantee and loan commitments are included within other provisions.

V) Employee benefits**○ Defined benefit plan – Medical.**

The bank provides healthcare benefits for pensioners after service ends. The healthcare commitment is considered as a specific subscription scheme. The recognized liability in the balance sheet regarding the pensioner's healthcare system is measured at the present value of the determined liabilities on balance sheet's date after deducting the fair value of the related assets and subtracting (adding) unrealized actuarial reconciliations of profits (losses) as well as the cost of the additional benefits regarding prior service terms.

An independent actuary who applies the Projected Unit Credit Method calculates the liability of the annually determined benefits system (future cash flows expected to be paid). The present value of the determined benefits system liability is measured through deducting these expected future cash flows to be paid by applying the rate of return of high-quality corporate bonds or the rate of return of government bonds in the same currency to be used in payment of benefits and which have almost the same maturity period as the pension benefit liabilities regarding these benefits.

Defined Contribution Plans: They are retirement plans in which the Bank pays certain contributions to Social Insurance Authority, and the Bank shall not be subject to any legal or constructive obligation to contribute further amounts.

The contributions are recognized as employee-benefit expenses when they are due. The prepaid contributions are recognized as an asset to the extent that the prepayment will lead to a reduction in future payments or a cash refund.

○ Social Insurance

The Bank pays contributions to Social Insurance Authority and the Bank has no further payment obligations once the contributions have been paid. The contributions are recognized as employee benefit expenses when they are due.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****V) Employee benefits (continued)****○ Employee profit share**

The Bank pays a percentage of the cash dividends as employee profit share; the employee profit share is recognized as part of dividends in the equity and as a liability when it is approved by the bank's general assembly, no obligation is recognized for the employees share in unappropriated profits.

W) Income tax

The income tax includes both current income tax, and deferred income tax. Income tax is recognized in the profit or loss, except when it relates to items directly recognized into equity, in which case the tax is also recognized directly in equity. Income tax is calculated on the taxable profits using the prevailing tax rates as of balance sheet date.

Deferred income tax is provided on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the financial statements. Deferred income tax is determined based on the method used to realize or settle the current values of these assets and liabilities, using the tax rates prevailing as of the balance sheet date.

Deferred tax assets are recognized when it is probable that the future taxable profit will be available against which the temporary difference can be utilized. Deferred tax assets are reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered. Reversal is subsequently permitted when there is a probable from its economic benefit limited to the extend reduced.

X) Customer Deposits, debt securities and other loans

Customer Deposits, debt securities and other loans are the Bank's source of debt funding. They are recognised initially at fair value minus incremental direct transaction costs. Subsequently, they are measured at their amortised cost using the effective interest rate method. The Bank doesn't designate any Customer Deposits, debt securities or other loans at FVTPL.

When the Bank sells a financial asset and simultaneously enters into an agreement to repurchase the asset (or a similar asset) at a fixed price on a future date (sale and repurchase agreement), the consideration received is accounted for as liability and the underlying asset continues to be recognized in the Bank's financial statements.

Y) Share capital**○ Share issuance costs**

Incremental costs that are directly attributable to the issue of an equity instrument are deducted from the initial measurement of the equity instruments.

Notes to the consolidated financial statements - For the year ended 31 December 2024**2. Summary of significant accounting policies (continued)****○ Dividends**

Dividends are recognized in equity in the year in which they are approved by the Bank's general assembly. These dividends include the employee share and board of director's bonus as stipulated by the article of incorporation and law.

Z) Custody activities

The Bank acts as custodian and in capacities this results in holding or managing of assets on behalf of individuals, trusts, and retirement benefit plans and other institutions. These assets and income arising thereon are excluded from these financial statements, as they are not assets of the Bank.

AA) Earning per share (EPS)

The Banks presents basic and diluted EPS for its ordinary shares. Basic EPS is calculated by dividing the profit or loss that is attributable to ordinary shares of the Bank by the weighted average number of ordinary shares outstanding during the period. Diluted EPS is determined by adjusting the profit or loss that is attributable to ordinary shares and the weighted average number of ordinary shares outstanding for the effects of the dilutive potential ordinary shares if any.

BB) Comparative figures

Whenever necessary, comparative figures have been adjusted to conform to changes in presentation in the current year.

3. Usage of Judgements and estimates

In preparing these separate financial statements, management has made judgements, estimates and assumptions in the application of its accounting policies and the reported amounts of assets, liabilities, income and expenses. Actual results may differ from these estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to estimates are recognized prospectively.

A- Judgements

Information about judgements made in applying accounting policies that have the most significant effects on the amounts recognized in the separate financial statements is included in the following notes:

- Note 3 – establishing the criteria for determining whether credit risk on a financial asset has increased significantly since initial recognition, determining the methodology for incorporating the forward-looking information into the measurement of the ECL and selection and approval for the models used to measure the ECL.
- Note 20 - classification of the financial assets; assessment for the business model within which the assets are held and assessment of whether the contractual terms of the financial assets are SPPI on the principal amount outstanding.

Notes to the consolidated financial statements - For the year ended 31 December 2024**B- Assumptions and estimation uncertainties**

Information about assumptions and estimation uncertainties at the reporting date that have a significant risk of resulting into a material adjustment to the carrying amounts of assets and liabilities within the next financial year is included in the following notes:

- Note 3 – Impairment of financial instruments, determination of inputs into the ECL measurement model including the key assumptions used in estimating recoverable cash flows and incorporating of forward-looking information.
- Note 20 - Measurement of the fair value of financial instruments.
- Note 31 - Measurement of defined benefit obligations: key actuarial assumptions.
- Note 13 - Recognition of deferred tax assets, availability of future taxable profits against which deductible temporary differences.
- Note 34 - Recognition and measurement of contingencies, key assumptions about the magnitude and the likelihood of an outflow of resources.

4. Financial Risk management

The bank, as a result of the activities it exercises, is exposed to various financial risks. Since the basis of financial activity is to accept risks, some risks or group of risks are analyzed, evaluated and managed altogether. The Bank intends to strike a balance between the risk and return and to reduce the probable adverse effects on the Bank's financial performance.

The most important types of risks are credit risk, market risk, liquidity risk and other operating risks. Market risk comprises foreign exchange volatility risk, interest rate risk and other pricing risks.

The bank's risk management policies are designed to identify and analyze these risks, to set appropriate risk limits and controls, and to monitor the risks and adherence to limits by means of reliable and up to date information system. The bank regularly reviews its risk management policies and systems to reflect changes in markets, products, and emerging best practice.

Those risks are managed by the Risk department in the light of policies approved by Board of Directors. The Risk department determines, evaluates and covers the financial risks, in collaboration with the Bank's various operating units, and the Board of Directors provides written policies for management of risks as a whole, in addition to written policies covering specific risk areas like credit risk, foreign exchange rate risk, interest rate risk and using the financial derivative and non-derivative instruments. Moreover, the Risk department is independently responsible for annual review of risk management and control environment.

Risk management governance and risk principles

Bank's risk management governance is based on:

- Strong managerial involvement, throughout the entire organization, starting from the Board of Directors down to operational field management teams.
- A tight framework of internal procedures and guidelines.
- Continuous supervision by business lines and support functions as well as by an independent body to monitor risks and to enforce rules and procedures.

Notes to the consolidated financial statements - For the year ended 31 December 2024**4. Financial Risk management (continued)**

Within the board, the Risk and Audit Committees are more specifically responsible for examining the consistency of the internal framework for monitoring risks and compliance.

A. Credit risk

The bank is exposed to credit risk, which is the risk of suffering financial loss, should any of the bank's customers, clients or market counterparties fail to fulfill their contractual obligations to the bank. Credit risk is the most important risk for the bank's business. Management therefore carefully manages its exposure to credit risk. Credit risk arises mainly from lending activities which resulted in loans, facilities and investment activities which result in including the financial assets in bank's assets. Credit risk is available in the off-balance sheet financial assets such lending commitment. The credit risk management and control are centralized in a credit risk management team, which reports to the Board of Directors and head of each business unit regularly.

A-1 Credit risk measurement.**- Loans and advances to banks and customers**

In measuring credit risk of loans and advances to banks and customers, the bank reflects three components:

- ✓ Probability of default – by the client or counterparty on its contractual obligations.
- ✓ Exposure at Default (Current exposures to the counterparty and its likely future developments, from which the bank derives the exposure at default.
- ✓ Loss given default.

Daily management bank activities involve these measurements of credit risk which reflect the expected loss (The expected loss model) and are required by the Basel committee on banking supervision.

The bank assesses the probability of default of individual customers using internal rating tools tailored to the various categories of the counterparty. They have been developed internally and combine statistical analysis with credit officer judgment. Clients of the bank are segmented into four rating classes. The rating scale which is as shown below reflects the range of default probabilities- defined for each rating class. This means that in principle, exposures might migrate between classes as the assessment of their probability of default changes. The rating tools are kept under review and upgraded as necessary. The bank regularly validates the performance of the rating and their predictive power with regard to default cases. The ratings updates and its monitoring are done through the SDDC and Credit Risk Committee. the structure for the rating is the same across 2023 & 2022., the overseeing for the model is done by the credit risk committee.

Notes to the consolidated financial statements - For the year ended 31 December 2024
4. Financial Risk management (continued)
A. Credit risk (continued)

CBE Description	CBE Rating	Internal Rating
Good loans	1	A+
Good loans	2	A
Good loans	2	B+
Good loans	2	B
Good loans	2	B-
Good loans	3	C+
Good loans	3	C
Good loans	3	C-
Good loans	4	D+
Good loans	5	D
Good loans	5	D-
Standard monitoring	6	E+
Standard monitoring	6	E
Special monitoring	7	PE-
non-performing	8	NPE-
non-performing	9	F
non-performing	10	Z

The above ratings are reviewed and approved by the Central Bank of Egypt. Impairment for non-performing loans determined using the discount expected cash flow from each client.

Exposure at default is based on the amounts the bank expects to be outstanding at the time of default. For example, for a loan this is the face value. For a commitment, the bank includes any amount already drawn plus the further amount that may have been drawn by the time of default, should it occur.

Loss given default or loss severity represents the bank's expectation of the extent of loss on a claim should default occur. It is expressed as a percentage of loss per unit of exposure and typically varies by type of counterparty, type and seniority of claim and availability of collateral or other credit mitigation.

- **Debt securities and other bills**

For debt securities, and other bills external rating such as (Standard & Poor's / Moody's) rating or their equivalents are used by the bank for managing of the credit risk exposures. In case such ratings are unavailable, internal rating methods are used that are similar to those used for credit customers. The investment in those securities and bills are viewed as a way to gain a better credit quality mapping and maintain a readily available source to meet the funding requirements at the same time.

Notes to the consolidated financial statements - For the year ended 31 December 2024**4. Financial Risk management (continued)****2. Credit risk (continued)****A-2 Risk limit control and mitigation policies.**

The Bank manages and controls credit concentrations at the borrowers' level, groups of borrowers' level, industries level and countries level.

The bank structures the levels of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, or groups of borrowers, and to geographical and industry segments. Such risks are monitored on a revolving basis and subject to an annual or more frequent review, when considered necessary. Limits on the level of credit risk by product, industry sector and by country are approved periodically by the Board of Directors.

The exposure to any one borrower including banks and brokers is further restricted by sub-limits covering on- and off-balance sheet exposures, and daily delivery risk limits in relation to trading items such as forward foreign exchange contracts. Actual exposures against limits are monitored daily.

Exposure to credit risk is also managed through regular analysis of the ability of the borrowers and potential borrowers to meet interest and capital repayment obligation and by changing these lending limits when appropriate.

The Central bank of Egypt require the bank to report on the top 50 Customers of the bank in order to monitor the concentration risk related to these customers and its impact on the capital adequacy ratio, and if the percentage exceeds 50% the bank is to work on adjusting this percentage to decrease it. In addition, the Central Bank of Egypt sets periodical limits to the exposures to be given to one client and his related parties to decrease the concentration risk.

Some other specific control and mitigation measures are outlined below:

❖ Collateral

The bank employs a range of policies and practices to mitigate credit risk. The most traditional of these is the taking of security for funds advances, which is common practice. The bank implements guidelines on the acceptability of specific classes of collateral or credit risk mitigation. The principal collateral types for loans and advances are:

- Mortgages over residential properties.
- Charges over business assets such as premises, inventory.
- Charges over financial instruments such as debt securities and equities.

Longer-term finance and lending to corporate entities are generally secured; revolving individual credit facilities are generally unsecured. In addition, in order to minimize the credit loss, the bank will seek additional collateral from the counterparty as soon as impairment indicators are identified for the relevant individual loans and advances.

Collateral held as security for financial assets other than loans and advances depends on the nature of the instrument. Debt securities, treasury and other eligible bills are generally unsecured, with the exception of asset-Backed Securities and similar instruments, which are secured by portfolios of financial instruments.

Notes to the consolidated financial statements - For the year ended 31 December 2024**4. Financial Risk management (continued)****2. Credit risk (continued)****A-2 Risk limit control and mitigation policies (continued)****❖ Derivatives**

The bank maintains strict control limits on net open derivative positions (i.e., the difference between purchase and sale contracts) by both amount and term. The amount subject to credit risk is limited to expected future net cash inflows of instruments, which in relation to derivatives are only a fraction of the contract, or notional values used to express the volume of instruments outstanding. This credit risk exposure is managed as part of the overall lending limits with customers, together with potential exposures from market movements. Collateral or other security is not usually obtained for credit risk exposures on these instruments, except where the bank requires margin deposits from counterparties.

Settlement risk arises in any situation where a payment in cash, securities or equities is made in the expectation of a corresponding receipt in cash, securities or equities. Daily settlement limits are established for each counterparty to cover the aggregate of all settlement risk arising from the bank market's transactions on any single day.

❖ Master netting arrangements

The bank further restricts its exposure to credit losses by entering into master netting arrangements with counterparties with which it undertakes a significant volume of transactions. Master netting arrangements do not generally result in an offset of assets and liabilities shown in the balance sheet, as transactions are either usually settled on a gross basis. However, the credit risk associated with favorable contracts is reduced by a master netting arrangement to the extent that if a default occurs, all amounts with the counterparty are terminated and settled on a net basis. The banks overall exposure to credit risk on derivative instruments subject to master netting arrangements can change substantially within a short period, as it is affected by each transaction subject to the arrangement.

❖ Credit related Commitments

The primary purpose of these instruments is to ensure that funds are available to a customer as required. Guarantees and standby letters of credit carry the same credit risk as loans. Documentary and commercial letters of credit – which are written undertakings by the bank on behalf of a customer authorizing a third party to draw drafts on the bank up to a stipulated amount under specific terms and conditions – are collateralized by the underlying shipments of goods to which they relate and therefore carry less risk than a direct loan.

Commitments to extend credit represent unused portions of authorizations to extend credit in the form of loans, guarantees or letters of credit. With respect to credit risk on commitments to extend credit, the bank is potentially exposed to loss in an amount equal to the total unused commitments. However, the likely amount of loss is less than the total unused commitments, as most commitments to extend credit are contingent upon customers maintaining specific credit standards.

IFRS 9 guidance defines EAD as an estimate of the exposure at a future default date, considering the expected changes in the exposure after the observation date, include pre-payments, and expected drawdowns on committed facilities. Further, the guidance states the following with respect to arriving at EAD:

- Drawn balance at the observation date and expected balance at future observation dates, considering the amortization schedule.

Notes to the consolidated financial statements - For the year ended 31 December 2024

- The undrawn balance proportion, expected to be utilized at the point of default.

Credit Conversion factor

Credit conversion factor (CCF) is a parameter describing what percentage of the unused off-balance sheet exposure is to be transformed into on-balance sheet exposure from the start of the observation period until default.

Currently the bank has used the default CCF (as per Basel guidelines) which is as follows:

Criteria	CCF
Maturity is greater than 12 months (greater than 1 year)	50% of the total unutilized exposure
Maturity is less than 12 months (less than 1 year)	20% of the total unutilized exposure
Committed accounts	100% of the total unutilized exposure

The bank monitors the term to maturity of credit commitments because longer-term commitments generally have a greater degree of credit risk than shorter-term commitments.

A.3 Impairment and provisioning policies (Measurement of expected credit losses)

The Bank's policies require the identification of three stages of classifying financial assets measured at amortized cost, loan commitments and financial guarantees as well as debt instruments at fair value through other comprehensive income in accordance with changes in credit quality since initial recognition and thereafter measuring the impairment losses (expected credit losses) Tools as follows:

The un-impaired financial asset is classified at initial recognition in the first stage and credit risk is monitored continuously by the Bank's credit risk management.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

2. Credit risk (continued)

A.3 Impairment and provisioning policies (Measurement of expected credit losses) (continued)

In the case of a significant increase in credit risk since the initial recognition, the financial asset is transferred to Stage 2 (the expected credit loss over the life of the asset).

In case of indications of impairment of the financial asset, it is transferred to Stage 3. The Bank is based on the following indicators to determine whether there is objective evidence of impairment:

- A significant increase in the rate of return on the financial asset as a result of increased credit risk.
- Significant negative changes in the activity and financial or economic conditions in which the borrower operates.
- Scheduling request as a result of difficulties facing the borrower.
- Significant negative changes in actual or expected operating results or cash flows.
- Future economic changes affecting the borrower's future cash flows.
- Early indicators of cash flow / liquidity problems such as delays in servicing creditors / business loans.
- Cancellation of a direct facility by the bank due to the high credit risk of the borrower.

The following table illustrates the proportional distribution of loans and credit facilities reported in the financial position for each of the four internal ratings of the Bank and their relevant impairment losses:

Bank's Rating	31 December 2024		31 December 2023	
	Loans and facilities %	Loan loss provision %	Loans and facilities %	Loan loss provision %
1- Good loans	56.2%	18.6%	60.7%	27.0%
2- Standard monitoring	41.1%	32.5%	35.3%	23.8%
3- Special monitoring	0.7%	2.6%	0.9%	2.2%
4- Nonperforming loans	2.0%	46.3%	3.1%	47.0%
	100.0%	100.0%	100.0%	100.0%

The internal rating tool assists management to determine whether objective evidence of impairment exists, based on the following criteria set out by the bank:

- Significant financial difficulties facing the counterparty;
- Breach of loan covenants as in case of default;
- Expecting the bankruptcy of the counterparty, liquidation, lawsuit, or finance rescheduling;
- Deterioration of the borrower's competitive position;
- Offering exceptions or surrenders due to economic and legal reasons related to financial difficulties encountered by the counterparty not provided by the bank in ordinary conditions;
- Deterioration in the value of collateral; and
- Downgrading below good loans grade.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

2. Credit risk (continued)

A-3 Impairment and provisioning policies (Measurement of expected credit losses) (continued)

The bank policies require the review of individual financial assets that are above materiality threshold at least annually, or more regularly when individual circumstances require. Impairment allowance on individually assessed accounts are determined by an evaluation of the incurred loss at balance sheet date on case-by –case basis. and are applied to all individually significant accounts. The assessment normally encompasses collateral hold including re-confirmation of its enforceability and the anticipated receipts for that individual account.

Collectively assessed impairment allowances are provided for portfolios of homogenous assets using the available historical experience, experience judgment and statistical techniques.

A-4 General Bank Risk Measurement Model

In addition to the four credit rating levels, management classifies categories that are more detailed so as to agree with the requirements of the Central Bank of Egypt (CBE). Assets subject to credit risk are classified in these categories in accordance with regulations and detailed conditions that largely depend on information related to the client, his/her activity, financial position, and regularity of repayment.

The bank calculates the required provisions for the impairment of the assets subject to credit risk, including commitments related to credit, on the basis of ratios specified by the Central Bank of Egypt. In case the impairment loss provision required by the Central Bank of Egypt exceeds that required for the purpose of financial statement preparation in accordance with the expected credit loss model, retained earnings is debited with crediting the General Bank risk reserve within equity.

This reserve is periodically revised by increase and decrease to reflect the amount of increase between the two provisions. This reserve is not subject to distribution. Note number (34/A) shows the movement in the Bank Risk Reserve during the financial year.

Following is a table of the worthiness levels for institutions in accordance with the internal assessment bases compared to the Central Bank of Egypt assessment bases and the provision ratios required for the impairment of the assets exposed to credit risk.

CBE Rating Categorization	Rating Description	Provision %	CAE rating	CAE Description	DPD
1	Low Risk	0%	1	Good	-
2	Average Risk	1%	1	Good	-
3	Satisfactory Risk	1%	1	Good	1
4	Reasonable Risk	2%	1	Good	2
5	Acceptable Risk	2%	1	Good	51
6	Marginally Acceptable Risk	5:3%	2	Standard monitoring	31
7	Watch List	20%	3	Special monitoring	89
8	Substandard	20%	4	non-performing	90
9	Doubtful	50%	4	non-performing	180
10	Bad Debt	100%	4	non-performing	More than one year

Notes to the consolidated financial statements - For the year ended 31 December 2024
2. Summary of significant accounting policies (continued)
A. Credit risk (continued)
A-5 Credit risk exposure before guarantees.

(All amounts are in thousand Egyptian pounds)

	31 December 2024	31 December 2023
Credit risk exposures relating to on-balance sheet items:		
Cash and balances with central bank	2,178,861	2,973,523
Due from Banks	40,619,392	38,715,068
Loans to banks	56,952	-
<u>Loans to customers</u>		
Loans to Individuals:		
- Overdrafts	63,814	80,330
- Credit cards	1,652,710	1,342,840
- Personal Loans	10,989,965	8,474,049
- mortgage Loans	2,370,218	1,457,483
<u>Loans To corporate entities:</u>		
- Overdrafts	10,954,659	10,317,959
- Direct Loans	26,424,615	19,668,504
- Syndicated loans	2,910,399	1,370,617
- Other Loans	66,786	187,112
Derivative financial instruments	341,320	20,970
<u>Financial investment</u>		
- Fair value through other comprehensive income	21,847,060	17,306,985
- Fair value through Profit and loss income	100,139	383,914
Other Assets	1,635,432	975,001
Total	122,212,322	103,274,355
	31 December 2024	31 December 2023
Credit risk exposures relating to off-balance sheet items:		
Customer Liabilities Under Acceptance	2,697,961	1,332,849
Commitments (Loans and liabilities – irrevocable)	4,142,983	3,182,029
Letter of credit	3,567,950	1,930,884
Letters of guarantee	21,705,143	14,971,307
Total	32,114,037	21,417,069

The above table represents a worse-case scenario of credit risk exposure to the bank at 31 December 2024 and 31 December 2023, without considering of any collateral held or other credit enhancements attached. For on-balance-sheet assets, the exposures set out above are based on net carrying amounts presented on the Balance Sheet.

As shown above, 45% of the total maximum exposure is derived from loans and facilities to customers versus 42% in the end of comparative year, where investments in debt securities represent 18% versus 17% in the end of comparative year

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

A. Credit risk (continued)

A-5 Credit risk exposure before guarantees (continued)

Management is confident in its ability to continue to control and sustain minimal exposure of credit risk to the bank resulting from both its loan and advances portfolio and debt securities based on the following:

- 97 % of the loans and advances portfolio is categorised in the top two grades of the internal rating system (2023: 96%);
- 94 % of the loans and advances portfolio are considered to be neither past due nor impaired (2023: 94%);
- Loans and advances individually assessed amount 1,122,796 thousand Egyptian pounds. (2023: 1,213,384 thousand Egyptian pounds).

The following table provides information on the quality of financial assets during the year:

Due from banks

31 December 2024	Stage 1 12 Months	Stage 2 Lifetime	Stage 3 Lifetime	Total
Credit rating				
Good debts	31,380,971	4,090,693	-	35,471,664
Standard Monitoring	5,147,728	-	-	5,147,728
Special Monitoring	-	-	-	-
Non-performing loan	-	-	-	-
Allowance for impairment losses	(110)	(10,227)	-	(10,337)
Net	36,528,589	4,080,466	-	40,609,055

31 December 2023

Credit rating	Stage 1 12Months	Stage 2 Lifetime	Stage 3 Lifetime	Total

Incorporation of forward-looking information

The bank incorporates forward looking information into both the assessment of whether the credit risk has increased of an instrument has increased significantly since its initial recognition and the measurement of the ECL.

The bank formulates three economic scenarios: a base case, which is the central scenario, developed internally based on consensus forecasts, and two less likely scenarios one upside and one downside scenario. The central scenario is aligned with the information used by the bank for other purposes such as strategic planning and budgeting, External information considered included economic data and forecast published by governmental bodies and monetary authorities such as international monetary fund.

The scenario probability weightings applied by the bank in measuring the ECL are as follows:

As of 31 December,	Scenario weight probability		
	Upside	Central	Downside
2024	25%	50%	25%
2023	25%	50%	25%

Periodically, the bank carried out stress testing of more extreme shocks to calibrate its determination of the upside and downside representative scenarios. A comprehensive review is performed at least annually on the designs of the scenarios by the bank's senior management.

The bank identified and documented key drivers of credit risk and credit losses for each portfolio of financial instruments and using an analysis of historical data, has estimated relationships between macro-economic variables and credit risk and credit losses.

The key drivers for the credit risk for the corporate portfolios are GDP vs total sovereign debt, and interest rates, while the key drivers for the credit risk for retail portfolios are inflation rates, unemployment rates and interest rates.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

A. Credit risk (continued)

A-5 Credit risk exposure before guarantees (continued)

Sensitivity of ECL to future economic conditions

The ECL are sensitive to judgements and assumptions made regarding formulation of forward-looking scenarios and how such scenarios are incorporated into the calculations. Management performs a sensitivity analysis on the ECL recognized on material classes of its assets.

The tables below show the loss allowance on loans and advances to corporate and retail portfolio assuming each forward-looking scenario (e.g. central, upside, and downside) were weighted 100% instead of applying scenario probability weights across the three scenarios. For ease of comparison, the table also includes the probability-weighted amounts that are reflected in the financial statements. The amounts below are inclusive of post model adjustments, as appropriate to each scenario.

A) Corporate

CAE has developed a methodology for the application of economic scenarios into the calculation of ECL by incorporating those scenarios into the estimation of the term structure of probability of default ('PD') and loss given default ('LGD'). For PDs, we consider the correlation of economic guidance to default rates for a particular industry in a country. For LGD calculations we consider the correlation of economic guidance to collateral values and realization rates for a particular country and industry. PDs and LGDs are estimated for the entire term structure of each instrument.

For impaired loans, LGD estimates consider independent recovery valuations based on internal forecasts corresponding to anticipated economic conditions and individual company conditions. In estimating the ECL on impaired loans that are individually considered not to be significant, CAE incorporates economic scenarios proportionate to the probability-weighted outcome and the central scenario outcome for non-stage 3 populations.

IFRS 9 ECL sensitivity to future economic conditions

ECL coverage of corporate loans	31 December 2024	Sensitivity change
Reported ECL (EGP 000)	1,167	
Gross carrying/nominal amount (EGP 000)	40,061	
Reported ECL coverage (percentage)	2.91%	
Coverage ratio by scenario (percentage)		
Upside scenario		
Downside scenario	2.17%	15%
Central scenario	4.57%	35%
	2.91%	50%

The impact change on the ECL corporate is EGP 299,704

Notes to the consolidated financial statements - For the year ended 31 December 2024

B) Retail

CAE has developed and implemented a methodology for incorporating forecasts of economic conditions into ECL estimates. The impact of economic scenarios on PD is modelled at a portfolio level. Historic relationships between observed default rates and macro-economic variables are integrated into ('IFRS 9 ECL') estimates by leveraging economic response models. The impact of these scenarios on PD is modelled over a period equal to the remaining maturity of underlying asset or assets. The impact on (LGD) is modelled for mortgage portfolios by forecasting future loan-to-value ('LTV') profiles for the remaining maturity of the asset by leveraging national level forecasts of the house price index and applying the corresponding LGD expectation.

IFRS 9 ECL sensitivity to future economic conditions

ECL coverage of retail at 31 December 2024	31 December 2024	Sensitivity change
Reported ECL (EGP000)	316	
Gross carrying/nominal amount (EGP000)	14,123	
Reported ECL coverage (percentage)	2.24%	
Coverage ratio by scenario (percentage)		
Upside scenario		
Downside scenario		1.72%
Central scenario		2.35%
		2.24%

The impact change on the ECL Retail is EGP 76,583

The following table shows the sensitivity analysis on the changes in the macro-economic factors used and its impact on the ECL calculated:

Macro-economic factors	Product	ECL charge	Range of change (+/-)	Increase ECL by
Gross Domestic Product	Retail term loans	243,593	22%	43,613
Inflation rate	Credit cards / Retail overdraft	72,164	85%	33,240
Government spending	Corporate term loans	1,167,405	35%	299,704

Loan modifications that are not credit-impaired

IFRS 9 introduces the concept of Modification of Assets, it occurs when the contractual cash flows of a financial assets are renegotiated or otherwise modified but not de-recognized. Once an asset is modified, IFRS 9 requires the change in fair value computed using original EIR to be recognized in P&L.

Loan modifications that are not identified as renegotiated are considered to be commercial restructuring. Where a commercial restructuring results in a modification (whether legalized through an amendment to the existing terms or the issuance of a new loan contract) such that group's rights to the cash flows under the original contract have expired, the old loan is derecognized and the new loan is recognized at fair value. The rights to cash flows are generally considered to have expired if the commercial restructure is at market rates and no payment-related concession has been provided.

There could be multiple underlying factors which contribute to the decision of modifying an asset. Assessment of modified assets require judgment as there is no specific guidance offered by IFRS 9.

This is an important area from the perspective of implementing IFRS 9 due to the following reasons:

1. Modification of cash flows of an asset can occur due to one of the following reasons:

- Asset modification due to commercial reasons
- Modification of assets due to credit related stress that is not construed as default
- Modification of assets due to financial difficulty that is construed as default

2. The treatment of each of the above cases would be different and hence it is important for the Bank to define how they would separate cases 1,2 and 3 as shown above.

1. Loan assets modified purely because of non- stress reasons like retaining a reputed customer etc. are regarded as the commercially modified assets as the Bank does not incur material losses due to these kinds of restructures. The losses due to these kind restructures would be compensated by the future benefits.

Some examples of cases where asset modification would be due to commercial reasons are as follows, any changes in rates including reduction in contractual rates done for strategic reasons:

- Any payment holidays declared for particular groups due to strategic or at behest of regulator
- Any changes to maturity that is initiated by customer who is in no financial difficulty and the bank is comfortable that even if the modification is not done, the client would be able to service the debt.
- Any changes in loan tenure, rates, repayment frequency initiated/done industry wide in agreement with regulatory authorities.

Such assets that are modified due to commercial reasons can be treated as Stage 1 as there are no other signs of significant increase of credit risk.

2. Modification of assets due to credit related stress that is not construed as default:

Some of the examples of credit related modification of assets could be:

- Modification of cash flows for the clients who are showing signs of financial difficulty e.g., 30 DPD plus or are showing any other signs of stress.

Notes to the consolidated financial statements - For the year ended 31 December 2024

- Extension of maturity or reduction in contractual rates that is not part of any strategic or regulatory mandate but is done because the client would not be able to service the original cash flows.
- Any other modifications that the Bank would not do in normal course of business but has to do in a specific case due to financial difficulty of the client.

However, it could be that even if such modifications are done, they do not result in material loss to the Bank. In such a case it need not be treated as default. Hence, such accounts should be moved into Stage 2.

Restructured loans and facilities.

A-6 Debt securities and treasury bills

The table below presents an analysis of debt securities according to the rating agencies at period end based on Moody's assessment of the countries issuing the investments:

(All amounts are in thousand Egyptian pounds)

	Treasury Bills	Investment at Fair value through other comprehensive income	Total
31 December 2024			
B3	14,698,399	7,248,800	21,947,199
Total	14,698,399	7,248,800	21,947,199

Assets acquired are classified under other assets in the balance sheet. These assets are sold whenever practicable.

A-7 Acquired collaterals.

During the year, the bank obtained assets by taking possession of collateral held as security as follows:

31 December 2024	Book Value
Assets Nature	
Lands	-
Total	-

Collaterals consideration for ECL calculation

The Bank adhere to CBE specified guidelines for application of collaterals as part of ECL calculation methodology, having said that the Bank will:

- Consider only cash collateral for stage 1 accounts, and
- Consider both cash and non- cash collaterals (post haircuts) for stage 2 accounts.
- Ministry of Finance guarantees are considered according to CBE instruction

Type of collateral

The Bank has following collaterals against the corporate loans:

Cash Margin, Time Deposit, Commercial Mortgage, Real Estate Mortgage Pledged (share), Ministry of Finance – Guarantee and Bank Guarantee

Notes to the consolidated financial statements - For the year ended 31 December 2024

The following Tables explains the significance of collaterals against the exposure for the portfolio.

Reporting Date	Exposure	Type of Collateral	Collateral amount	Collateral Coverage
Dec-24	5,437,051	Cash	3,611,987	66%
Dec-24	62,242	Treasury Bills	62,159	100%

Dec-24	-	Mortgage	-	-
Dec-24	3,014,899	CGC GUARANTEE	2,129,750	71%
Dec-24	50,030,442	No Collateral	-	0%

Collateral Valuation

In-line with IFRS 9 collateral requirements of frequent revaluation of collateral and enforceability of collaterals all the collaterals were assessed, and valuation was performed to derive best estimate of collateral ECL purposes.

i. Cash Collaterals:

Cash Collaterals i.e., Cash Margins/Term Deposits have been considered as it is.

ii. Non-Cash Collaterals:

Non-cash collaterals are further evaluated in order to derive value of collateral at future business dates/repayment dates. Straight line depreciation schedule is applied based on remaining life of each asset (in months) up till maturity of the exposure.

Assumptions:

Maturity of the Commercial mortgage is considered to be of 5 years.

Maturity of the Real Estate mortgage is considered to be of 20 years.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

B) Market risk

The bank takes on exposure to market risks, which is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risks arise from open positions in interest rate, currency, and equity products all of which to expect are exposed to general and specific market movements and changes in the level of volatility of market rates or prices such as interest rates, credit spreads foreign exchange rates and equity prices the bank separates exposures to market risk into either trading or non-trading portfolios.

The market risks arising from trading and non-trading activities are concentrated in bank treasury and monitored by two teams separately. Regular reports are submitted to the Board of Directors and heads of each business unit regularly.

Trading portfolios include those positions arising from market-making transactions where the bank acts as principal with clients or with the market.

Non-trading portfolios primarily arise from the interest rate management of the entity's retail and commercial banking assets and liabilities. Non-trading portfolios also consist of foreign exchange and equity risks arising from the bank's held-to-maturity and available-for-sale investments.

B-1 Market risk measurement techniques.

As part of the management of market risk, the bank enters interest rate swaps to match the interest rate risk associated with the fixed-rate long-term debt securities and loans to which the fair value option has been applied. The major measurement techniques used to measure and control market risk are outlined below.

Value at risk

The bank applies a 'value at risk' (VAR) methodology to its trading and non-trading portfolios and at a bank level to estimate the market risk of positions held and the maximum losses expected, based upon a number of assumptions. For various changes in market conditions The Board sets limits on the value of risk that may be accepted for the bank, for trading and non-trading purposes separately and they are monitored in daily basis with the bank risk management department.

VAR is a statistically based estimate of the potential loss on the current portfolio from adverse market movements. It expresses the 'maximum' amount the bank might lose, but only to a certain level of confidence (99%). There is therefore a specified statistical probability (1%) that actual loss could be greater than the VAR estimate. The VAR model assumes a certain 'holding period' until positions can be closed (10 days). It also assumes that market moves occurring over this holding period will follow a similar pattern to those that have occurred over 10-day periods in the past. The bank's assessment of past movements is based on data for last year. The bank applies these historical changes in rates, prices, indices, etc. directly to its current positions – a method known as historical simulation. Actual outcomes are monitored regularly to test the validity of the assumptions and parameters/factors used in the VAR calculation.

The use of this approach does not prevent losses outside of these limits in the event of more significant market movements.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

C) Market risk (continued)

B-1 Market risk measurement techniques (continued)

As VAR constitutes an integral part of the Bank's market risk control regime, VAR limits are established by the Board annually for all trading portfolio operations and allocated to business units. Actual exposure against limits, together with a consolidated group-wide VAR, is reviewed daily by bank risk management department.

The quality of the VAR model is continuously monitored by back testing the VAR results for trading books. All back-testing exceptions and any exceptional revenues on the profit side of the VAR distribution are investigated, and all back-testing results are reported to the Board of Directors.

Stress tests

Stress tests provide an indication of the potential size of losses that could arise in extreme conditions. The stress tests carried out by bank treasury include risk factor stress testing, where stress movements are applied to each risk category; emerging market stress testing, where emerging market portfolios are subject to stress movements; and ad-hoc stress testing, which includes applying possible stress events to specific positions or regions – for example, the stress outcome to a region following a currency peg break.

The results of the stress tests are reviewed by senior management in each business unit and by the Board of Directors. The stress testing is tailored to the business and typically uses scenario analysis.

B-2 Summary of value at risk

VAR for trading portfolio as per the risk type

(All amounts are in thousand Egyptian pounds)

	12-month till 31 December 2024			12-month till 31 December 2023		
	Average	High	Low	Average	High	Low
Foreign exchange risk	(20,601)	(29,849)	(646)	(8,300)	(11,944)	(4,598)
Interest rate risk	(3,577)	(47,779)	(704)	(9,198)	(12,989)	(6,296)

The increase in the VAR especially in interest rate risk is correlated with the sensitivity in international financial market interest rate.

The three above results are calculated independently of the intended positions and the historical market movements. The gross VAR of the trading and the non-trading does not represent the exposed value of the bank risk due to the correlation between the risk types, portfolio types and whatever the effect following it.

VAR is calculated on an end-of-day basis and does not reflect exposures that may arise on positions during the trading day.

The VAR measure is dependent on the bank's position and the volatility of market prices. The VAR of an unchanged position reduces if market price volatility declines and vice versa.

B-3 Foreign exchange risk

The bank takes on exposure to the effects of fluctuations in the prevailing foreign currency exchange rates on its financial position and cash flows. The Board sets limits on the level of exposure by level of currency and in aggregate for both overnight and intra-day positions which are monitored daily. The table below summarizes the bank's exposure to foreign currency exchange rate risk at.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

B) Market risk (continued)

B-4 Interest rate risk

Interest rate risk

- Interest rate risk is the risk to income or capital arising from fluctuating interest rates. Interest rate risk is a vital part of the Bank's business activity as taking on excessive interest rate risk exposure can potentially threaten earnings and the Bank's equity.
- Accordingly, interest rate risk is measured to manage the level of exposure to adverse movements of interest rates and limit the potential risk that can be derived.

Organization of the management of Structural Interest Rate risks

- Interest Rate Risk Banking Book identification and measurement is carried out by the Assets and Liabilities Management Unit (ALMU), which comes under the authority of the Bank's Finance Department.
- Risk associated with the Trading activities is closely measured and monitored on by the Market Risk unit through the following set of limits: Value at Risk, Stress tests, Notional limits, and Sensitivity limits.
- Decisions related to interest rate risk exposure, limits, and the corrective action plans are taken by the Assets & Liabilities Management Committee (ALCO), which is headed by the Bank's Managing Director with the Chief Commercial Officer, acting as the proxy of the Committee Chairman. Head of ALM is acting as the Secretary member of the Committee.
- Action plans for rectifications of excessive interest rate risk exposures are proposed by ALM Unit to be approved by the ALCO.

Assets & Liabilities Management Committee Responsibilities:

- To decide the hedging for interest rate risks, and to validate decisions for the investment/placement guidelines.
- To review and approve any assumptions used for the identification and measurement of the interest rate risk i.e., ALM Conventions.
- To review and approve the Bank's Risk Strategy including limits for all financial Risks.

Assets & Liabilities Management Unit Responsibilities:

- Update all the assumptions used for the identification and measurement of the interest rate risk.
- Calculation and monitoring of Interest rate risk and definition of hedging needs (macro hedging) to coordinate with Treasury the elaboration of short and medium terms hedging strategy to be submitted to ALCO.
- Project and anticipate future changes in Interest Rate gaps in order to forecast limits consumption and hedging needs.
- Provide action plans for bringing gaps within the approved limits.
- Follow up and notify the ALCO of the progress made in implementing ALCO's decisions.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

B) Market risk (continued)

B-4 Interest rate risk (continued)

Treasury Unit Responsibilities:

- Provide all required updates relative to Markets movements to the ALCO.
- Managing the maturities concentration of the investment portfolio according to the guidelines proposed and approved by the ALCO.
- Execution of Interest rate risk hedging as per ALCO decisions through either Treasury Bonds or Bills in the HTCS portfolio for EGP gaps, or through Interest rate swaps for foreign currency gaps.

Strategy of Interest Rate Risk Management:

- The Bank's main strategy is to ensure an optimal and stable net interest income while controlling exposure to interest rate risk within tolerable parameters.
- Any residual interest rate exposure must comply with the sensitivity limits approved by the ALCO. This is computed as aggregate Net Present Values of total gaps in all currencies to measure the exposure of the bank as percentage of owned funds (EVE) and Net Banking Income (EAR) for interest rate shocks of 300bp for EGP and 200bps for other currencies, to be compared with NPV sensitivity limit.

Measurement and Monitoring of Interest rate risks.

- Interest Rate Gaps calculation is done based on the end of month balances in order to quantify the Bank's exposure to structural interest rate risks.
- All balance sheet items are distributed in time buckets according to their amortization as follows:
 1. Contractual fixed interest rate products are amortized according to their respective maturity dates.
 2. Floating products are amortized according to their respective repricing period.
 3. All other balance sheet items are amortized according to ALM's interest rate gaps Conventions (as approved by ALCO)

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

B) Market risk (continued)

B-4 Interest rate risk (continued)

The tables below summaries the bank's exposure to the interest rate fluctuations risk which include carrying value of the financial instruments categorized based on the repricing dates or the maturity date – whichever is earlier.

2. Summary of significant accounting policies (continued)

B) Market risk (continued)

B-5 Liquidity risk

- Liquidity risk management is the ability to accurately identify and quantify the main sources of the bank's liquidity risk in a timely manner.
- Liquidity risk arises from either the bank's inability to meet its obligations as they fall due or to fund increases in assets without incurring undesirable cost or losses.
- Liquidity risks are categorized into two risk types:
 - o Funding liquidity risk when the Bank cannot fulfill its payment obligations because of an inability to obtain funding.
 - o Market liquidity risk when the Bank is unable to sell or transform its Liquidity buffer into cash without significant losses.

Organization of Liquidity Risk Management

- Liquidity risk identification and measurement is carried out by the Assets and Liabilities Management Unit (ALMU), which comes under the authority of the Bank's Finance Department.
- ALMU identifies maturities mismatches of both Assets & Liabilities, which enables the bank management to manage the mismatch well in advance and adopt the proper funding strategy to hedge for this risk before it crystallizes.
- Decisions related to risk exposure, limits, and the corrective action plans are taken by the Assets & Liabilities Management Committee (ALCO)
- Action plans for rectifications of liquidity risk exposures are proposed by ALM Unit to be approved by the ALCO.

Assets & Liabilities Management Committee Responsibilities:

- To link the Bank's Funding Strategy with market changes and ensure diversification of the funding structure.
- To ensure adequate liquidity while managing the Bank's spread between interest income and expense.
- To decide the hedging for liquidity, and to validate decisions for the investment/placement guidelines.
- To ensure monitoring and maintenance of all regulatory Liquidity Ratios
- To review and approve any assumptions used for the identification and measurement of the Liquidity gaps i.e., ALM Conventions.
- To review and approve the Bank's Risk Strategy including limits for all Liquidity Risks.
- To review and approve the liquidity contingency plan as well as any updates to it.

Assets & Liabilities Management Unit Responsibilities:

- Calculation and monitoring of liquidity risk and definition of hedging needs according to funding and placements guidelines.
- Calculation and monitoring of regulatory Liquidity Ratios.
- Monitoring and management of both the direction and extent of Asset-Liability mismatch through liquidity gaps measurement.
- Ensuring the anticipated funding needs during stress scenario are available by maintaining enough buffer of liquid asset for each main currency.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continue)

B) Market risk (continued)

B-5 Liquidity risk (continued)

Treasury Unit Responsibilities:

- Day-to-day funding/investment managed by monitoring future cash flows to ensure that requirements can be met in a timely manner. This includes replenishment of funds as they mature or borrowed by customers.
- Monitoring the liquidity ratios against internal and regulatory requirements by the Central Bank of Egypt.
- Maintaining an active presence in global money market to enable funding/investment, especially through interbank market.
- Maintaining a portfolio of highly marketable assets, which can be easily liquidated/converted into cash against any unforeseen interruption to cash flows.

Strategy of Liquidity Risk Management:

- The Bank's main objective is to finance its activities at the best possible rates under normal conditions and to ensure it can meet its obligations in the event of a crisis.
- Accordingly, the main principles of the bank's liquidity management are as follows:
 - o Management of the short-term liquidity in accordance with the regulatory framework.
 - o Diversification of funding resources.
 - o Maintenance of a portfolio of liquid assets.

Measurement and Monitoring of Structural Liquidity risk.

- The bank's liquidity management framework comprises the following process:
 - o Regular assessment of the bank structural liquidity profile and its development over time.
 - o Monitoring of the diversification of funding resources.
 - o Assessment of the Bank's finding needs on the basis of the budget forecasts in order to plan appropriate funding solutions.
- Liquidity Gaps calculation is done based on the end of month balances in order to quantify the Bank's exposure to structural liquidity risks.
- All balance sheet items are distributed in time buckets according to their amortization as follows:
 1. Contractual products are amortized according to their respective maturity dates.
 2. All other balance sheet items are amortized according to ALM's interest rate gaps Conventions (as approved by ALCO)

The table below presents the cash flows payable by the bank under non-derivative financial liabilities for managing liquidity risk by remaining contractual maturities at the date of the statement of financial position.

The amounts disclosed in the table are the contractual undiscounted cash flow, whereas the bank manages the liquidity risk based on the undiscounted expected cash flows and not the contractual cash flows.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continue)

B) Market risk (continued)

B-5 Liquidity risk (continued)

Assets available to meet all the liabilities and cover all the commitments related to loans include cash, balances with central banks and due from banks, treasury bills and other governmental securities, and loans and advances to banks and customers.

Proportion of loans to clients' maturity has been extended which are due within a year and during the normal activity of the bank. In addition, there are some pledged debt instruments, treasury bills and government securities to guarantee the liabilities. The Bank has the ability to meet the unexpected net cash flows through the sale of securities as well as interbank market resources and FX swaps.

Total liabilities (contractual maturity dates)	60,999	5,946	23,640	61,011	-	151,596
Assets held for managing liquidity risk (contractual maturity dates)	132,136	1,126	1,652	6,688	-	141,602

The bank has divided the financial assets and liabilities as per the contractual maturity to the periods mentioned above through the main automated system of bank, expected returns on those financial assets and liabilities were calculated and divided on the same basis as the above-mentioned basis. When calculating, the expected returns non-renewal of those assets and liabilities at maturity has been assumed.

Available assets used to meet all the liabilities and to cover all the commitments related to loans include cash, balances with central banks and sue from banks, treasury bills and other governmental securities, and loans and advances to banks and customers.

Proportion of loans to clients' maturity has been extended which are due within a year and during the normal activity of the bank. In addition, there are some pledged debt instruments, treasury bills and government securities to guarantee the liabilities. The Bank has the ability to meet the unexpected net cash flows through the sale of securities and to find other sources of funding.

Financial Derivatives

a) *Derivatives settled on a net basis.*

The Bank's derivatives that will be settled on a net basis include:

- Foreign exchange derivatives: over the counter (OTC) currency options, currency futures, exchange traded currency options; and
- Interest rate derivatives: interest rate swaps for which net cash flows are exchanged, forward rate agreements, OTC interest rate options, exchange traded interest rate futures, exchange traded interest rate options and other interest rate contracts.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

B) Market risk (continued)

B-5 Liquidity risk (continued)

The table below analyses the bank's derivative financial liabilities that will be settled on a net basis into relevant maturity groupings based on the remaining year at the date of the statement of financial position to the contractual maturity date. The amounts disclosed in the table are the contractual undiscounted cash flows.

(All amounts are in thousand Egyptian pounds)

C) Fair value of financial assets and liabilities

C-1 Financial instruments measured at fair value.

The following table analyses financial instruments measured at fair value at the reporting date by the level in the fair value hierarchy into which the fair value measurement is categorized. The amounts are based on the values recognized in the statement of financial position. The fair value includes any deferred differences between the transaction price and the fair value on initial recognition when the fair value is based on a valuation technique that uses unobservable inputs.

C-2 Financial instruments not measured at fair value.

The table below summarizes the book value of those financial assets and liabilities that are measured at amortized cost.

(EGP Thousands)

	31 December 2024 Carrying amount	31 December 2023 Carrying amount
<u>Financial Assets</u>		
Due from banks	40,609,055	38,702,153
Loans and advances to customers	53,221,487	41,168,888
<u>Financial Liabilities</u>		
Due to banks	482,571	200,294
Customer's deposits	95,484,168	84,173,489
Other Loans	1,769,153	1,077,035

Notes to the consolidated financial statements - For the year ended 31 December 2024

Due from banks: Represents the value of floating rate short-term placements and overnight deposits. The estimated fair value of floating profit bearing deposits is based on discounted cash flows using prevailing money-market interest rates for debts with similar credit risk, rates, and similar maturity date.

Loans and advances to customers: Represents the value of gross financing to customers, net of impairment losses provision. The estimated fair value of the financing is the discounted cash flows expected to be collected. The cash flows were discounted cash flows using prevailing money-market interest rates for debts with similar credit risk, rates, and similar maturity date.

Due to banks: Represents the fair value estimated for the deposits having indefinite value dates, including non-profits-bearing deposits, represents the amount to be paid on demand.

Customer deposits:

The customer deposits are divided in to current and noncurrent balances. The estimated fair value of deposits is based on discounted cash flows using prevailing money-market interest rates for debts with similar credit risk, rates, and similar maturity date.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

D) Capital management

The bank's objectives when managing capital, which is a broader concept than the 'equity' on the face of the statement of financial position, are:

- To comply with the capital requirements set by Arab Republic of Egypt.
- To safeguard the bank's ability to continue as a going concern so that it can continue to provide returns for shareholders and benefits for other stakeholders; and
- To maintain a strong capital base to support the development of its business.
- Maintaining a minimum issued and paid-up capital at EGP 5 billion. The Banks' paid-up capital kept at EGP 5 billion at the end of the current period.

Capital Adequacy Ratio (Basel 2):

Capital adequacy and the use of regulatory capital are monitored daily by the bank's management, employing techniques based on the guidelines developed by the Basel Committee and the European Community Directives, as implemented by the Central Bank of Egypt (CBE) for supervisory purposes, the required information is filed with the Authority on a quarterly basis.

The CBE requires the bank to:

- The bank maintains a ratio of 10% or more of total regulatory capital to its risk-weighted assets and liabilities, Minimum level of capital adequacy ratio reached 12.5% during 2022.

The capital adequacy ratio numerator comprises two tiers:

Tier 1 capital:

Consists of two parts, going concern capital and additional going concern.

Tier 2 capital:

Going concern capital, qualifying subordinated loan capital, consists of:

- 45% of the value of the special reserve.
- 45% of the increase in the fair value of the book value of financial investments in subsidiaries and affiliates.
- Other financial convoluted instruments.
- Subordinated loans with amortization of 20% per year in the last 5 years of maturity.
- Loan loss provision "General" by not more than 1.25% of total assets and contingent liabilities weighted risk weights.

Type of Risk:

- Credit Risk.
- Market Risk.
- Operations Risk.

Operational risk has been measured based on the "Standardized Approach" to replace the "Basic Indicator Approach" in accordance with the circular dated on 4 January 2021, regarding the regulatory instructions for operational risk management. Which stated that banks should comply with the implementation of the operational risk model using the "Standardized Approach" to replace the "Basic Indicator Approach" within the application of the final steps for implementing Basel III regulations.

Notes to the consolidated financial statements - For the year ended 31 December 2024

2. Summary of significant accounting policies (continued)

D) Capital management

The risk weighted assets are between zero and 200% classified according to the nature of the debit party for each asset which reflect the assets related credit risk taking into consideration the cash guarantees. The same treatment is used for the off-balance sheet amounts after performing the adjustments to reflect the contingent nature and the expected losses for these amounts.

The bank complied with local capital requirements and with the countries' requirements where outside branches (based on Basel II) were operating in the last two years.

	<u>31 December</u> <u>2024</u> <u>LE,000</u>	<u>31 December</u> <u>2023</u> <u>LE,000</u>
Tier I Going Concern Capital	13,870,585	9,821,486
Tier II Gone Concern Capital	1,793,544	1,373,482
Total Capital	<u>15,664,129</u>	<u>11,194,968</u>
Credit Risk	70,672,039	50,570,874
Market Risk	3,024	379,541
Operation Risk	6,148,401	6,148,401
Top 50 Effect	1,314,506	3,251,518
Total Risks	<u>78,137,970</u>	<u>60,350,334</u>
Capital Adequacy Ratio %	<u>20.05%</u>	<u>18.55%</u>

Financial Leverage Ratio:

Financial leverage represents a simple, complementary measure of the capital adequacy standard, but it is not calculated according to risk weights, and to reflect the relationship between the first tranche of capital used in the capital adequacy standard (after exclusions), and the bank's assets on and off the balance sheet that are not weighted by risk weights. It must not be less than 3%.

$$\text{Financial Leverage Ratio: } \frac{\text{First tranche of capital after exclusions}}{\text{assets on and off the balance sheet that are not weighted by risk weights}} \geq 3\%$$

Notes to the consolidated financial statements - For the year ended 31 December 2024

5. Segment analysis

Segment activity involves operating activities, assets used in providing banking services, and risk and return management associated with this activity, which might differ from other activities. Segment analysis for the banking operations involves the following:

Large, medium, and small enterprises:

Including current account, deposit, overdraft account, loan, credit facilities, and financial derivative activities.

Investment:

Encompasses money management activities.

Retail:

Encompasses current account, saving account, deposit, credit card, personal loans, and real estate loans activities,

Asset and liability management:

Encompasses other banking operations, such as asset and liability management. It also encompasses administrative expenses that can hardly be classified with other sectors.

Transactions among segments are performed according to the bank's operating cycle, and include operating assets and liabilities as presented in the bank's statement of financial position.

19. Derivatives financial instruments

The Bank uses the following derivative instruments:

- Currency forward contracts represent commitments to purchase/sell foreign and local currencies, including in unexecuted portion of spot transactions.

Credit risk at the Bank is considered low. Future interest rate agreements represent future exchange rate contracts negotiated on a case-by-case basis. These contracts require financial settlements of any differences in contractual interest rates and prevailing market interest rates on future dates based on contractual amount/nominal value agreed on.

- Currency or/and interest swap contracts represent the commitments to exchange a group of cash flows with another. These contracts' result is the exchange of currencies or interest rates (i.e. fixed rate for floating rate) or both (i.e. cross-currency interest rate swaps). No exchange of principal takes place except for certain currency swaps.

The Bank's credit risk represents the potential cost to replace the swap contracts if counterparties fail to fulfill their obligation. This risk is monitored on an ongoing basis by comparing current fair value and contractual amount. To control an existing credit risk, the Bank assesses counterparties using the same techniques as for its lending activities.

- The buyer (issuer) gives to seller (holders) a right, not an obligation, to buy (buy option) or to sell (sell option) at a certain date or within a certain period of time by certain amount denominated in foreign currency or a financial instrument with prior agreed price. The buyer receives, in return, a commission against the burden of risk he took on option contracts that are either traded in the market or negotiable between the Bank and one of its customers. The Bank is exposed to credit Risk for the purchased options' contracts only and to the extent of its book value which represent its fair value.
- The notional amounts of certain types of financial instrument are used as a basis for comparison purpose, with financial instruments recognized on the balance sheet but do not necessarily indicate the amounts of future cash flows or the current fair value of the instruments and therefore, does not indicate the Bank's exposure to credit or price risks.

The derivative instruments become favorable (assets) or unfavorable (liabilities) as a result of fluctuations in the market interest rates or foreign exchange rates related to them. The aggregate contractual or notional amount of the existing financial derivative instruments, the duration to which instruments are favorable or unfavorable, and the aggregate fair value of financial assets and liabilities derivatives can fluctuate significantly from time to time.

Notes to the consolidated financial statements - For the year ended 31 December 2024

All instruments are for trading purposes, there is no hedging during the year.

Notes to the consolidated financial statements - For the year ended 31 December 2024

30. Retirement benefit obligations

	31 December 2024 LE,000	31 December 2023 LE,000
Medical benefits liability		
Post-employment medical benefits	223,414	140,257
	223,414	140,257

There is a liability on the Bank towards the Post-Employment Medical Benefits Fund for the payment of medical insurance premiums for the ex-employees of ex-EAB who reach the retirement age or resign from ex-EAB before its merger with Calyon Bank – Egypt in September 2006.

The Bank is obligated to pay these premiums for providing medical care for the retired employees' spouses and children till death or reach 21 years of age in respect of children.

The Bank entrusted an actuary with determining the net present value of all future medical insurance premiums required to be paid by the Bank until the death of retirees & their spouses, and their children until reaching 21 years of age.

The movement in liabilities during the financial year is as follows:

Balance at the beginning of the year	140,257	190,979
Current service cost	2,790	5,816
Cost of interest	32,530	27,436
Contributions paid	(12,000)	(9,731)
Remeasurements included in OCI	59,837	(74,243)
